

If you can scan it, you can sell it with CORE's FastPAD™. You can create "Scan Sheets" with items identified with barcodes so you can sell products that don't have their own attached barcodes.

In the example below, you have drinks with modifiers, food items, combo meals with menu board numbers, and the ability to sell "splash cash" with bonus.

The use of scan sheets on a FastPAD™ is great for mobile carts and menus with less than a hundred items. CORE Clients have operated Burger Kings, pizza shops, locker rental, parking, retail apparel, snack bar, candy shops by weight, concession sales, paid attractions, and even amusement and waterpark admissions, all with minimum training and maximum speed and throughput.

The process provides the fastest cashless operation you can imagine allowing for more sales transactions per hour and fewer operator errors.

We even included the keyboard commands of Clear and Enter as well as a method to select options from the screen of the FastPAD™ [F1, F2, F3] without putting down the handheld barcode scanner.

We have found the FastPAD™ to be the preferred Point of Sale inside entertainment facilities since the FastPAD is great for selling barcoded products like bottled beverages, packaged snacks, and sundry items. Your staff can quickly learn to sell anything by simply aiming at the barcode on the product or the scan sheet.

For cashless sales the FastPAD™ with hand scanner becomes the perfect selling device as the operator completes the sale with the scanner in one hand and delivers product with the other hand. Only our S3 handheld reader with built-in display can do better as it provides complete mobility without cables.

Some other examples of the use of Scan Sheets that you can create:
